Figure A.1 – Multi-duration Standardized Precipitation Index plot for the Portland group of stations. The horizontal axis shows the analysis duration at which the SPI is calculated. The vertical axis shows time. The legend at the top displays the colors used on the plot and their associate SPI value. Blue colors indicate wet conditions, and red colors indicate dry conditions.

Figure A.2 – Multi-duration Standardized Precipitation Index plot for the Lebanon group of stations. The horizontal axis shows the analysis duration at which the SPI is calculated. The vertical axis shows time. The legend at the top displays the colors used on the plot and their associate SPI value. Blue colors indicate wet conditions, and red colors indicate dry conditions.
